

Test 04 — Set Operators

TSQL Query Fundamentals

This is a timed test. You have thirty minutes to complete the test. When you finish the test, email me your source file as a text document, and let me know that you have finished. I will ask you to run your program so that I can see that it compiles and runs.

Your deliverable will be a text document containing both your queries and the query results. You will use the TSQLV4 database in SQL Server to answer the following question:

I need a report giving the customer ID, customer name, and customer contact of all customers who did not make an order in 2014, but made orders in 2015 and 2016. You will need to use a subquery in the WHERE clause that uses a set operator. You do not need to use a JOIN.

Here is the output:

```
custid  companame  contactname
1 Customer NRZBB Allen, Michael
6 Customer XHXJV Poland, Carole
12 Customer PSNMQ Ray, Mike
16 Customer GYBBY Birkby, Dana
23 Customer WVFAF Liu, Jenny
26 Customer USDBG Koch, Paul
27 Customer WMFEA Schmllerl, Martin
31 Customer YJCBX Orint, Neil
32 Customer YSIQX Krishnan, Venky
40 Customer EFFTC Owens, Ron
42 Customer IAIJK Zaki, Amr
43 Customer UISOJ Wu, Qiong
45 Customer QXPPT Wright, David
47 Customer PSQUZ Lupu, Cornel
50 Customer JYPSC Goldin, Maxim
53 Customer GCJSG Mallit, Ken
54 Customer TDKEG Nash, Mike
64 Customer LWGMD Gaffney, Lawrie
74 Customer YSHXL MacDonald, Scott
78 Customer NLTYP Ma, Andrew
82 Customer EYHKM Veninga, Tjeerd
90 Customer XBBVR Larsson, Katarina
```
