Test 01 — Simple Queries

TSQL Query Fundamentals

This is a timed test. You have one hour to complete the test. When you finish the test, email me your source file as a text document, and let me know that you have finished. I will ask you to run your program so that I can see that it compiles and runs.

Youe deliverable will be a text document containing both your queries and the query results. You will use the Northwind databaase in SQLite to answer the following questions:

1. List the company name, the contact name and the country of all customers in Poland.

2. List the order Id, the order date, and the destination city of all orders shipped to Berlin.

3. How many boxes of Filo Mix do we have in stock?

4. List the telephone numbers of all of our shippers.

5. Who is our oldest employee? Who is our youngest employee?

6. List the suppliers where the owner of the supplier is also the sales contact.
